

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

ALMANAC CATALOGUE
OF
ZODIACAL STARS.

PRINTED FOR THE USE OF

THE AMERICAN EPHEMERIS AND NAUTICAL ALMANAC.

BUREAU OF NAVIGATION,
WASHINGTON.
1864.

UNIVERSITY PRESS:
WELCH, BIGELOW, AND COMPANY,
CAMBRIDGE.

P R E F A C E.

THE Almanac Catalogue of Zodiacal Stars has been prepared and published under the direction of the Bureau of Navigation, Navy Department.

The selection and arrangement of the stars was made by MR. JOHN DOWNES, Assistant Nautical Almanac.

The Catalogue contains all the stars, to the $6\frac{1}{2}$ magnitude inclusive, which, from their positions, are liable to be occulted by the moon: stars of the smaller magnitudes belonging to important clusters are also included. It embraces a zone extending to eight degrees of latitude on each side of the ecliptic; and consequently contains many stars which do not come within the limits of occultation, but which, from their proximity to the moon's path, may be required for moon-culminations.

A large proportion of the stars belonging to clusters have been selected from authorities which do not give the constants of reduction to apparent places. The constants, in these cases, have been computed by the formula given in the Introduction.

These computations, as well as the reductions to a common epoch, have been made in the Nautical Almanac Office, by MR. G. W. HILL, under the direction of the Superintendent, who has conducted the work through the press.

Nautical Almanac Office,
Cambridge, Mass., Feb. 11, 1864.

ZODIACAL STARS.

INTRODUCTION.

THE present catalogue has been prepared with a view to facilitating the computer's labor in some of the departments of the American Ephemeris and Nautical Almanac Office; especially in the preparation of the lists of occultations, and in the selection of stars proper to be observed in connection with the moon's transit. Another object has been to furnish a catalogue which, from its size and cheapness, will be more accessible to computers than the larger and more expensive catalogues, which are rarely to be met with excepting in the libraries connected with scientific associations. Of these, the catalogue in most general use in this country is that of the British Association, — a heavy quarto, which comes to us at a price which many computers cannot well afford to pay. The present catalogue, which will answer every purpose equally well with the more costly works in the reduction of occultations and moon-culminations, forms a handy little pamphlet which can be freely circulated among computers at a very trifling expense. Another advantage of the small cost and size of the work is, that new editions can be issued at short intervals, with such corrections of the stars' places as may be derived from new observations.

The places of the stars have been derived from the following authorities. Wherever they are found in the Greenwich *Twelve-Year Catalogue*, their mean right ascensions and declinations have been reduced to the epoch 1850 from that work. As this catalogue consists of two distinct catalogues, giving for the same star, in most cases, different places, as deduced from an unequal number of observations, weights proportionate to the number of observations in each were allowed in combining the results. Whenever, as was frequently the case, one of the coördinates was wanting, its place was supplied from the *British Association Catalogue*, which was the one used next in order of preference. With the exception of the places derived from the *Twelve-Year Catalogue*, and those of the smaller stars grouped in clusters, most of the places were taken from this (*The British Association Catalogue*), as were also the precessions, secular variations, and proper motions used in reducing the places from the *Twelve-Year Catalogue*. In some cases, however, where the stars' places were given only approximately, or where they rest only on the authority of LACAILLE, the places have been determined from *Oeltzen's Argelander's Southern Zones*.

The stars of the Pleiades group, not found in the *Twelve-Year Catalogue*, have been reduced from BESSEL's places, given in the *Astronomische Untersuchungen*, Band I. All the stars quoted by the numbers of RUMKER and LALANDE, and the hour and number of WEISSE, are reduced from these respective authorities. Wherever the precessions and secular variations have not been given, they have been computed for this work. All stars, to the $6\frac{1}{2}$ magnitude, and situated within eight degrees of the ecliptic, are supposed to be given in this catalogue. In general, stars smaller than those of the $6\frac{1}{2}$ magnitude are not given. It is only where they are grouped in clusters, as in the Pleiades, Hyades, and a few smaller groups,

that the smaller stars are included. In these cases they are given to the 9th or 10th magnitude. In some instances, the more interesting multiple stars are also given to the smaller magnitudes.

Mean Places of the Stars.

The mean right ascensions and declinations of the stars are given in this catalogue for the epoch 1850. For any other time, these coördinates may be computed by means of the annual variations which are given for each star. These variations are composed of the annual precessions and proper motions. In most catalogues the precession and proper motion are treated separately in the reductions. As the precessions are themselves variable quantities, they will sometimes require correction for the secular variation, which is the variation of precession in one hundred years. The combined precession and proper motion being affected by the same variation, and nearly in the same degree (the only difference being the very slight change which takes place in the proper motion), the annual variations will require the same corrections.

Denoting by t_0 , the epoch of the catalogue,
 t , the time for which the mean place is required,
 v , the annual variation in right ascension,
 Δp , its secular variation,
 v' , the annual variation in declination,
 $\Delta p'$, its secular variation,

then $t - t_0$ will be the interval for which the whole variation must be computed, and that value of the annual variation must be employed which corresponds to the middle of this interval. Or, denoting by v_0 the annual variation for the epoch t_0 , we must take

$$v = v_0 + \frac{\Delta p}{200} (t - t_0)$$

$$v' = v'_0 + \frac{\Delta p'}{200} (t - t_0).$$

Then, denoting by

a_0 the mean right ascension at the epoch t_0 ,
 a " " " " time t ,
 δ_0 " declination at the epoch t_0 ,
 δ " " " " time t ,

we shall have

$$a = a_0 + v (t - t_0)$$

$$\delta = \delta_0 + v' (t - t_0).$$

EXAMPLE. Let the mean right ascension and declination of 32 Tauri, star No. 174, be required for the beginning of the year 1864.

Taking $a_0, \delta_0, v_0, v'_0, \Delta p, \Delta p'$ from the catalogue, we have

	a_0	$3^{\text{h}} 48^{\text{m}} 0.77^{\text{s}}$		δ_0	$+ 22^{\circ} 2' 32.0''$
	v_0	$+ 3.531$		v'_0	$+ 10.78$
	Δp	$+ 0.0145$		$\Delta p'$	$- 0.431$
1864-1850,	$t - t_0$	$+ 14.$		$t - t_0$	$+ 14.$
$\Delta p (t - t_0) \div 200,$	(1)	$+ 0.001$	$\Delta p' (t - t_0) \div 200,$	(1)'	$- 0.03$
$v_0 + (1)$	v	$+ 3.532$	$v'_0 + (1)'$	v'	$+ 10.75$
	$v (t - t_0)$	$+ 49.45$		$v' (t - t_0)$	$+ 2 30.5$
$a_0 + v (t - t_0)$	a	$3 48 50.22$	$\delta_0 + v' (t - t_0),$	δ	$+ 22 5 2.5$

Apparent Places of the Stars.

When a star's mean place has been computed for the beginning of the year, the apparent place for any time, τ , within the year can be computed by the method which BESSEL has given in his *Tabulæ Regiomontanæ*, from the logarithms of the constants $a, b, c, d, a', b', c', d'$, given for each star in the catalogue, and the logarithms of A, B, C, D , given in the *Nautical Almanac* for every day in the year.

Let a' be the apparent right ascension, δ' the apparent declination, μ the proper motion in right ascension, μ' the proper motion in declination, and τ the fraction of the year corresponding to a given date, and we shall have

$$\left. \begin{aligned} x &= Aa + Bb + Cc + Dd + \frac{1}{15}E + \tau\mu \\ x' &= Aa' + Bb' + Cc' + Dd' + \tau\mu' \end{aligned} \right\} (A)$$

for which the logarithms of A, B, C, D , and the residual E , must be taken for the given date. The value of $\frac{1}{15}E$ can never exceed $0^{\circ}.0034$, and can seldom be required. Then

$$\left. \begin{aligned} a' &= a + x \\ \delta' &= \delta + x' \end{aligned} \right\}$$

In consequence of an interchange of letters which has been made in the notation of BESSEL's formulæ by the late English astronomer BAILY, it will be necessary, in order that the computer may not be misled, to give the formulæ for computing $A, B, C, D, a, b, c, d, a', b', c', d'$. The arrangement of the letters is according to BESSEL's notation.

$$A = \tau - 0.34236 \sin \Omega + 0.00410 \sin 2 \Omega - 0.02519 \sin 2 \odot + 0.00294 \sin (\odot + 82^{\circ} 34').$$

$$B = -9''.2235 \cos \Omega + 0''.0896 \cos 2 \Omega - 0''.5508 \cos 2 \odot - 0''.0093 \cos (\odot + 280^{\circ} 21').$$

$$C = -20''.4451 \cos \omega \cos \odot.$$

$$D = -20''.4451 \sin \odot.$$

$$E = -0''.0483 \sin \Omega + 0''.0015 \sin 2 \Omega - 0''.0035 \sin 2 \odot.$$

$$a = 3^{\circ}.07201 + 1^{\circ}.33701 \sin a \tan \delta.$$

$$b = \frac{1}{15} \cos a \tan \delta.$$

$$c = \frac{1}{15} \cos a \sec \delta.$$

$$d = \frac{1}{15} \sin a \sec \delta.$$

$$a' = 20''.0551 \cos a.$$

$$b' = -\sin a.$$

$$c' = \tan \omega \cos \delta - \sin a \sin \delta.$$

$$d' = \cos a \sin \delta.$$

μ = the annual proper motion in right ascension.

μ' = the annual proper motion in declination.

τ = the time reckoned from the moment when the sun's mean longitude was 280° , as expressed in fractional parts of a tropical year.

\odot = the sun's true longitude.

Ω = the longitude of the moon's ascending node.

ω = the obliquity of the ecliptic.

a = the star's mean right ascension for the beginning of the year.

δ = the star's mean declination for the beginning of the year.

a' = the star's apparent right ascension at the time τ .

δ' = the star's apparent declination at the time τ .

In BAILY's notation BESSEL's A is replaced by C , B by D , C by A , and D by B ; the letters $a, b, c, d, a', b', c', d'$, being interchanged in the same manner, to the no small inconvenience of the computer, who, whenever he employs an unfamiliar catalogue, or an unfamiliar ephemeris, must first consult the special formulæ to ascertain how the $a, b, c, d, a', b', c', d'$, of the former are to be combined with the A, B, C, D of the latter.* This notation is employed in the *British Nautical Almanac* and the *British Association Catalogue*, and more recently in the *Connaissance des Temps*. It is also employed in the *American Ephemeris* from its commencement to the year 1864, inclusive. In making some changes in the *American Ephemeris* for future years, commencing with 1865, it has been very properly decided to give the notation as BESSEL gave it.

The computer will therefore bear in mind, that, for years previous to 1865, in the use of the *American Ephemeris* with the present catalogue, BAILY's notation must be employed. The same notation must also be adopted for the British and French Ephemerides. Instead of equations (A), therefore, we must use

$$\left. \begin{aligned} x &= Ca + Db + Ac + Bd + \tau\mu \\ x' &= Ca' + Db' + Ac' + Bd' + \tau\mu' \end{aligned} \right\} \text{(B)}$$

With the *American Ephemeris* after 1864, the *Astronomisches Jahrbuch*, Berlin, the *Almanaque Nautico*, Cadiz, and probably other European Ephemerides, equations (A) must be employed.

The logarithms of A, B, C, D are given in the *American Ephemeris* for the Washington mean midnight of every day of the year. Where great precision is necessary, and the time for which the star's place is required, differs by several hours from Washington mean midnight, it may be necessary to interpolate between the values of logs A, B, C, D for the given date and those of the preceding or following date.

Arrangement of the Articles of the Catalogue.

The *first* column of the left-hand page contains the number of the star as referred to this catalogue.

The *second* column contains the stars' names arranged in the order of their right ascensions. Whenever no name is given, the name of the constellation, or of the catalogue from which the star's elements were taken, is given.

The *third* column contains the star's magnitude, generally as given in the authorities which have furnished the other elements.

The *fourth* column contains the star's mean right ascension referred to the epoch 1850.

The *fifth* column contains the annual variation of the star's right ascension. This variation is composed of the star's geometrical annual precession in right ascension and its annual proper motion in right ascension.

The *sixth* column contains the secular variation of the precession in right ascension, and consequently of the annual variation; and represents the change which takes place in this element in one hundred years.

The *seventh* column contains the star's annual proper motion in right ascension, or the annual change which takes place in the star's right ascension independently of the geometrical precession.

* We regret this derangement of BESSEL's notation the more, when we consider the slight grounds on which it was made. BAILY's reasons for the change are given in the following note from the *British Association Catalogue*: "It may be proper here to state, that, in the choice of characters to represent different quantities, I have thought it desirable that we should as much as possible make them serve the purpose of an artificial memory. It is on this account that I have made A, B represent the quantity by which the ABerration is determined; C , the quantity by which preCession is determined; and D the quantity by which the Deviation, or (as it is now more generally called) the nutation, is determined." — *B. A. C.*, page 34.

INTRODUCTION.

ix

The four next columns, *eighth* to *eleventh* inclusive, contain corresponding elements of the star's declination.

In the *first* column of the right-hand page the ordinal numbers are repeated to prevent mistaking the line corresponding to that of the star on the left-hand page.

The following eight columns, from the *second* to the *ninth* inclusive, contain the logarithms of $a, b, c, d, a', b', c', d'$, for computing the star's apparent place for any day, as explained on page v.

The *tenth* and *eleventh* columns contain reference numbers to the *British Association* and *Twelve-Year Catalogues*.

Examples of Reduction.

EXAMPLE 1. To compute the apparent right ascension and declination of ϕ Aquarii, star No. 1043 for October 30, 1865.

	$t - t_0 = 15$				$\tau = \frac{5}{6}$ year.			
See formula, p. iv.,	a_0	^h 23	^m 6	^s 33.14	δ_0	[°] 6	['] 51	["] 24.3
	v_0	+		3.114	v'_0	+		19.35
	Δp	—		0.0065	$\Delta p'$	+		0.105
	μ	+		0.006	μ'	—		0.16
	v	+		3.114	v'	+		19.36
	$(t - t_0) v$	+		46.710	$(t - t_0) v'$	+	4	50.40
	a	23	7	19.850	δ	—	6	46 33.90

For 1865, equations (A).

logs a, b, c, d	$+ 0.4925$	$- 7.8921$	$+ 8.8151$	$- 8.1908$
logs A, B, C, D	$+ 9.9661$	$+ 0.9348$	$+ 1.1707$	$+ 1.0982$
logs a', b', c', d'	$+ 1.2903$	$+ 9.3638$	$+ 9.6056$	$- 9.0650$
logs Aa, Bb, Cc, Dd	$+ 0.4586$	$- 8.8269$	$+ 9.9858$	$- 9.2890$

INTRODUCTION.

For 1864, equations (B).

$\log s \ a, b, c, d + 0.5700$	$+ 7.8864$	$- 8.2388$	$- 8.8595$
$\log s \ C, D, A, B + 9.8797$	$+ 0.8412$	$+ 0.5339$	$- 1.3032$
$\log s \ a', b', c', d' - 0.6694$	$+ 9.9879$	$- 8.6365$	$+ 9.0148$
$\log s \ Ca, Db, Ac, Bd + 0.4497$	$+ 8.7276$	$- 8.7727$	$+ 0.1627$
$\log s \ Ca', Db', Ac', Bd' - 0.5491$	$+ 0.8291$	$- 9.1704$	$- 0.3180$

$Ca + 2.816^s$	$Ca' - 3.54''$
$Db + 0.053$	$Db' + 6.75$
$Ac - 0.059$	$Ac' - 0.15$
$Bd + 1.454$	$Bd' - 2.08$
$\tau\mu - 0.016$	$\tau\mu' - 0.57$
$x + 4.248$	$x' + 0.41$
$\overset{h \ m \ s}{a'} 17 \ 7 \ 3.474$	$\delta' - 26^\circ 23' 57.67''$

During the present year a survey of the cluster Præsepe in the constellation Cancer will be made at the National Observatory. This fine cluster is supposed to contain upwards of sixty stars from the 7th to the 10th magnitude. When the survey is completed, these stars will be included in this catalogue.
